

SANTA CLARA RIVER DISTRIBUTION SYSTEM

\*\*\* 1975 ASSESSMENT \*\*\*

\$ 5,450.00

FORWARD:

There is the new type of assessment data which is to be used within the Santa Clara assessment formula beginning with the 1971 Assessment and it is again to be used for the 1975 Water Assessment formula. (See 1971 Water Assessment Formula)

CALCULATION OF ASSESSMENT:

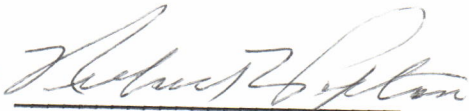

The 1975 Assessment is in the amount of \$ 5,450.00, less 10% (Gunlock Reservoir) which leaves \$ 4,905.00, less 10% (Power Users) which leaves \$ 4,414.50 and \$ 4,414.50 divided by 563.70 "Ratios" equals \$ 7.83129 pro-rata ratio cost times that amount listed for each such water user.

PROOF:

563.70 units times \$ 7.83129 equals	\$ 4,414.50
Power Assessment equals	490.50
Gunlock Reservoir equals	<u>545.00</u>

TOTAL 1975 ASSESSMENT . . . . \$ 5,450.00

Prepared by:

Richard R. Pexton  
February 24, 1975

1976 Assessment is same as 1975 -- \$ 5,450.00

March 9, 1976
